Subject Index

Adsorption, 143, 191
Adsorption from solutions, 219
Air/water interface, 231
α-Al_2O_3, 263
Alumina, 25
Alumina substrates, 285
Anionic liposomes, 247
Anisol, 321
Anthraquinone, 269
Apparent viscosity, 1
Arachidic acid monolayers, 311
Asphaltenes, 199

Bauxites, 131
Bridging, 263

Camphoric acid, 231
Carbonyl, 311
Carboxylate, 311
Carboxylic acids, 285
Catalytic, 57
Cationic liposomes, 247
Cationic surfactant, 175, 321
charge, 131
Charge neutralization, 25
Chemical vapor deposition (CVD), 257
Cibacron Blue F3GA, 161
CIDEP, 269
Coagulant, 57
Colloidal silica, 83
Colloidal suspensions, 299
Computer simulations, 299
Convective self-assembly, 275

Deflocculation, 1
Degree of dispersion, 1
Delipidized stratum corneum, 35
Didodecyl dimethyl ammonium bromide (DMAB), 123
Dielectric constant, 275
Dielectric relaxation, 93
Dispersions, 263
Drop size distributions, 43
Dye affinity membranes, 161

Electrohydrodynamic instability, 93
Electrolyte, 305
Electrophoretic light scattering, 257
Electrorheology, 93
Emulsification–diffusion method, 123
Emulsion rheology, 43
Estrogen, 123

Filterability, 1
Flocculation, 25
Floc strength, 1
Fractal theory of adsorption, 219
Freeze-fracture electron microscopy, 35

Geopolymerization, 143
Gold colloids, 239
Gum Arabic macromolecules, 263

Hexagonal phase, 83
High internal phase ratio emulsions, 43
High-resolution low-temperature scanning electron microscopy, 35
^{1}H-NMR, 321
Hollow-fiber sorbents, 161
Hydrophobic surfaces, 285

Impedance, conductivity, 93
Influence of cholesteryl sulfate in stratum corneum liposome solubilization, 15
Interaction energy, 1
Interfacial shear viscosity, 43
Interfacial tension, 43
Intermittent motion, 231
Interparticle forces, 299
Isoelectric point, 257

Kraft lignins, 199

PII: S0927-7757(01)00599-4

Lignosulfonate, 175
Lignosulfonates, 199
Lipid adsorption, 247
Liposomes, 191
Liposomes deposition, 247
Liquid drop spreading, 109
Lysozyme, 161

Metal chelates, 161
Micelle, 269
Microcalorimetry, 247
Microemulsion, 269, 321
Monolayer, 191
Moving contact line, 109
Multilayer film, 239

Nanoparticle, 123
Nitration, 321
Non-equilibrium, 231

Overall energy balance, 109

Particle array, 275
PFS, 57
PGSE-NMR, 321
pH-dependence, 311
Phenol, 321
PM-IRRAS, 311
Polyacrylic acid, 25
Polyamide, 161
Poly (D,L lactide-co-glycolide) (PLGA), 123
Polyethylene glycol, 191
Polymer, 25
Polymerization, 57
ζ-potential, 257
Primitive model, 299

Reaction rate, 321
Red mud, 131
Regioselectivity, 321

Self-assembled monolayer, 257
Self-assembly, 239
Self-motion, 231
Shear sensitivity, 1
Silane coupling agents, 65
Sludge rheology, 1
Small angle X-ray scattering, 83
Sodium–aluminium silicates, 65
Sodium silicate, 143
Static light-scattering changes, 15
Statistical analysis, 219
Steric, 263
Stratum corneum lipid liposomes, 15
Stratum corneum liposomes, 35
Stratum corneum liposome solubilization, 15
Surface, 131
Surface fractal dimension, 219
Surface modification, 65
Surface phase capacity, 219
Surface sol–gel process, 239
Surfactant partition coefficients, 15
Surfactant/stratum corneum lipids molar ratios, 15
Syntactic foam, 275

Temperature, 305
Thermodynamic parameters, 247
Titration, 131
Transition, 305
TRESR, 269
Triton X-100, 15, 305

Viscosity, 57

Yield stress, 1, 263

Zeta potential, 25, 191, 263
Zinc citrate particles, 247
Zirconia, 143
ZrO_2 TiO_2, 263
